OBJECTIVE

Full-Stack Web Developer specializing in Vue.js and Laravel, passionate about building high-quality, responsive user interfaces and robust back-end systems. Seeking to contribute to impactful web projects in a collaborative, growth-oriented environment.

TECHNICAL SKILLS

- **Frontend:** Vue.js, Nuxt.js, JavaScript, TypeScript, HTML5, CSS3, Tailwind CSS, Bootstrap, SASS, Responsive & Mobile-First Design

- **Backend:** PHP, Laravel Framework, RESTful API Development, Object-Oriented Programming (OOP), Design Patterns, SOLID Principles

- **Database:** MySQL, SQLite, MongoDB – schema design, query optimization, and data migration

- **Version Control & Tools:** Git, GitHub, CLI, Laravel Artisan, Composer, NPM

- **Other:** Familiar with Algorithms & Data Structures, debugging tools, and performance optimization

PROJECTS

- **Hisouby: hisouby.web.app**
  → A single-page application (SPA) built with Nuxt.js, using Firebase Firestore as the database and Firebase Hosting for deployment. It's designed to train students in mathematics from elementary to high school levels.

- **YourMenuPage:**
  → A single-page application (SPA) built with Laravel and Inertia.js, based on Vue.js and using Sanctum for authentication, with SQLite as the database. It is designed as an online menu platform for restaurants and coffee shops, helping users find digital menus from their favorite spots nationwide. Users can search for restaurants and view their menus, prices, locations, and more. Restaurant owners can create accounts to save items and access a dashboard with features to add, edit, and delete food items.
